EDUCATION

Tufts University

Medford, MA

B.S. in Computer Science, Minors in AI Development and Finance - School of Engineering

Expected May 2028

GPA: 3.80

Honors: Dean's List in all semesters

Relevant Coursework: Intro to Computer Science, Discrete Math, Calculus II & III, Linear Algebra, Data Structures, Algorithms, Intro to Machine Learning, Machine Structure & Assembly Language, Introduction to Finance, Entrepreneurial Finance, Global Investment Management, Technical & Managerial Communication, Differential Equations

RELEVANT EXPERIENCE

Tufts Panetta Lab

Research Assistant

April 2026 - Present

- Co-authored a research manuscript accepted for publishing by IEEE-HKN, tested and evaluated YOLO and RF-DETR architectures for fish migration tracking
- Evaluated and selected open source LLM architectures for fine tuning on addiction therapy applications, researching tradeoffs in model size, training requirements, and domain suitability.
- Configured and operated LiDAR equipment to collect 3D spatial data; processed raw scans into refined point cloud representations to support development of a spatial mapping tool for firefighter navigation and situational awareness.
- Labeled datasets of up to 300 images using Roboflow in order to train various models

Xceler.ai

Software Development Intern

June 2025 - August 2025

- Developed and tested a trade management platform which supports real time risk assessment and provides transparent commodities data to users to facilitate futures and options trading.
- Led quality checks on our data pipeline, found and fixed recurring bugs, and made sure the options systems received clean and accurate data.
- Researched and analysed futures and options data to create an efficient and accurate representation of input data.

PROJECTS

Rosetta | JumboHack

Participant

February 2026

- Engineered a full stack educational web application with team members using React and Vite designed to teach programming languages via coding challenges which progressively increase in difficulty.
- Integrated Claude API with custom prompt engineering logic to dynamically generate boilerplate starter code, unit tests, and standardized solutions.
- Co-configured a Supabase (PostgreSQL) backend with team members to track user challenge progression.
- Collaborated on integrating a Judge0 API pipeline to connect frontend components with real time code execution, delivering instantaneous compiler feedback to users.
- Deployed the final application to production using Vercel to provide an accessible, live platform for users.

Gymbo | JumboHack

Winner of the Emerging Technology Track

February 2025

- Developed a winning predictive analytics platform that won the Emerging Technology Track
- Built, trained and tested a Random Forest regression model with team to forecast gym equipment demand based on real time utilization data.
- Co-designed and deployed a Flask REST API to serve predictions in real time and achieve robust performance

TECHNICAL SKILLS

- **Languages:** C++, Python, Java, SQL, MATLAB
- **Frameworks & Developer Tools:** Supabase, PostgreSQL, Git, Roboflow, Linux/Unix, Vercel

LEADERSHIP & ACTIVITIES

Tufts Ballroom Dancing Club

2025 - Present

- Competed in 6 university level events and was a finalist in one of them.
